

Small Business VOIP Router: Problems with Access to Some Websites

Document ID: 108640

Contents

IntroductionHow can I access some websites using the Linksys VOIP router?Related Information

Introduction

This article is one in a series to assist in the setup, troubleshooting, and maintenance of Cisco Small Business products.

Q. How do I access some websites using the Cisco Small Business VoIP router?

A.

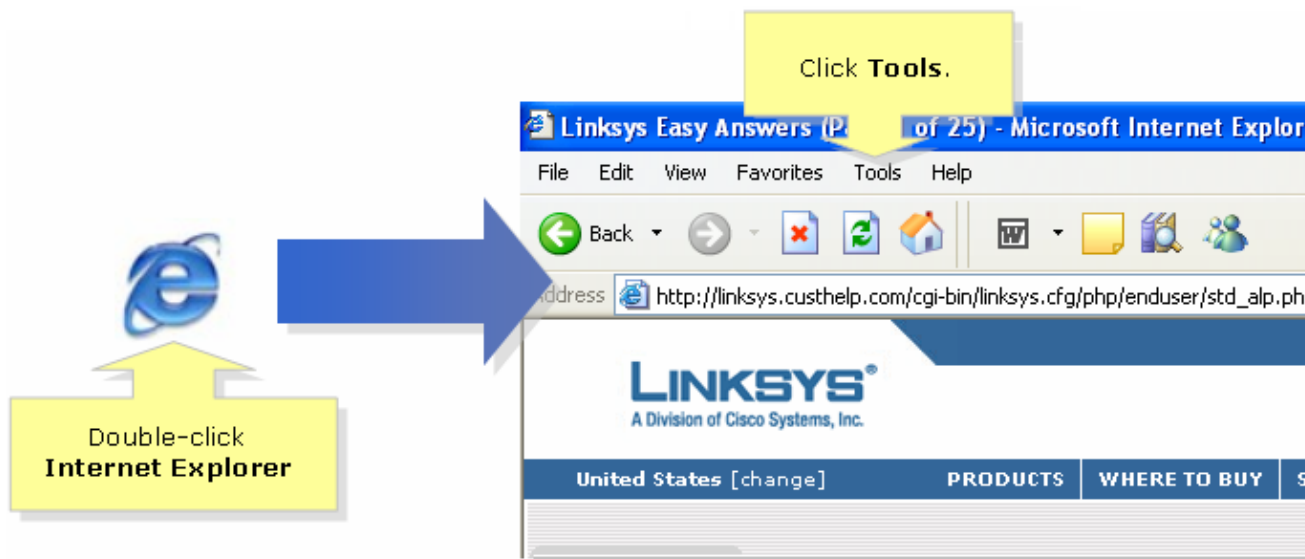

Inability to access certain websites is due to three main factors:

1. Security on the web browser is set too high
2. MTU not set on the router properly
3. Secured websites

Lower Security Settings on Internet Explorer

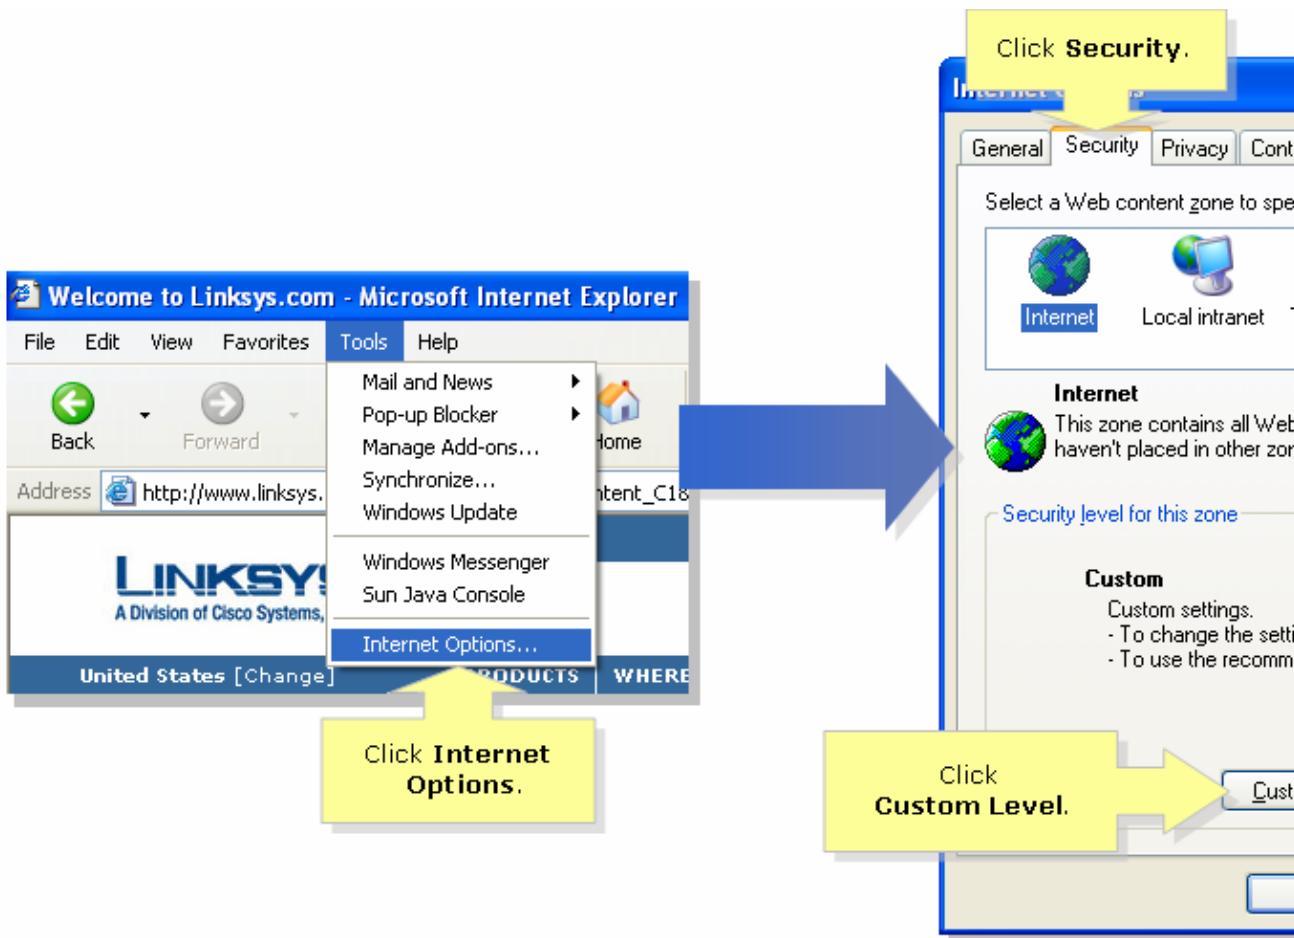

Step 1:

Double-click *Internet Explorer*, and click *Tools*.

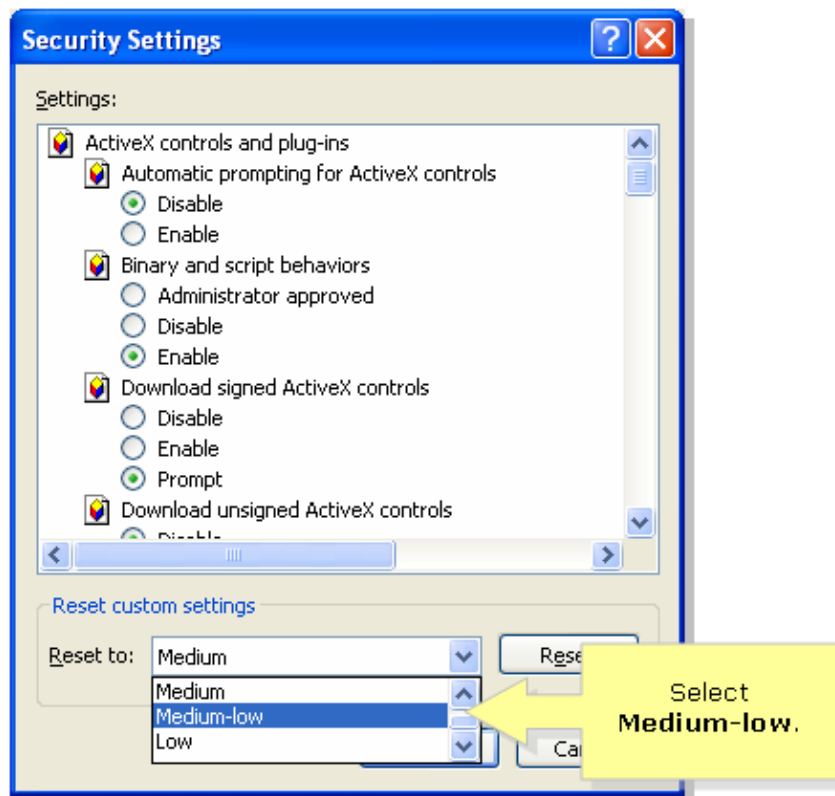

Step 2:

Select *Internet Options*, click *Security* > *Custom Level*. A window similar to Step 3 will appear.

Step 3:

Under the *Reset to* drop-down menu, select *Medium-Low*, and click *OK*.

Note: If this did not work, enable the MTU on the ADSL gateway. For instructions, complete the steps in the next section.

Enable MTU on the VoIP Router

Step 1:

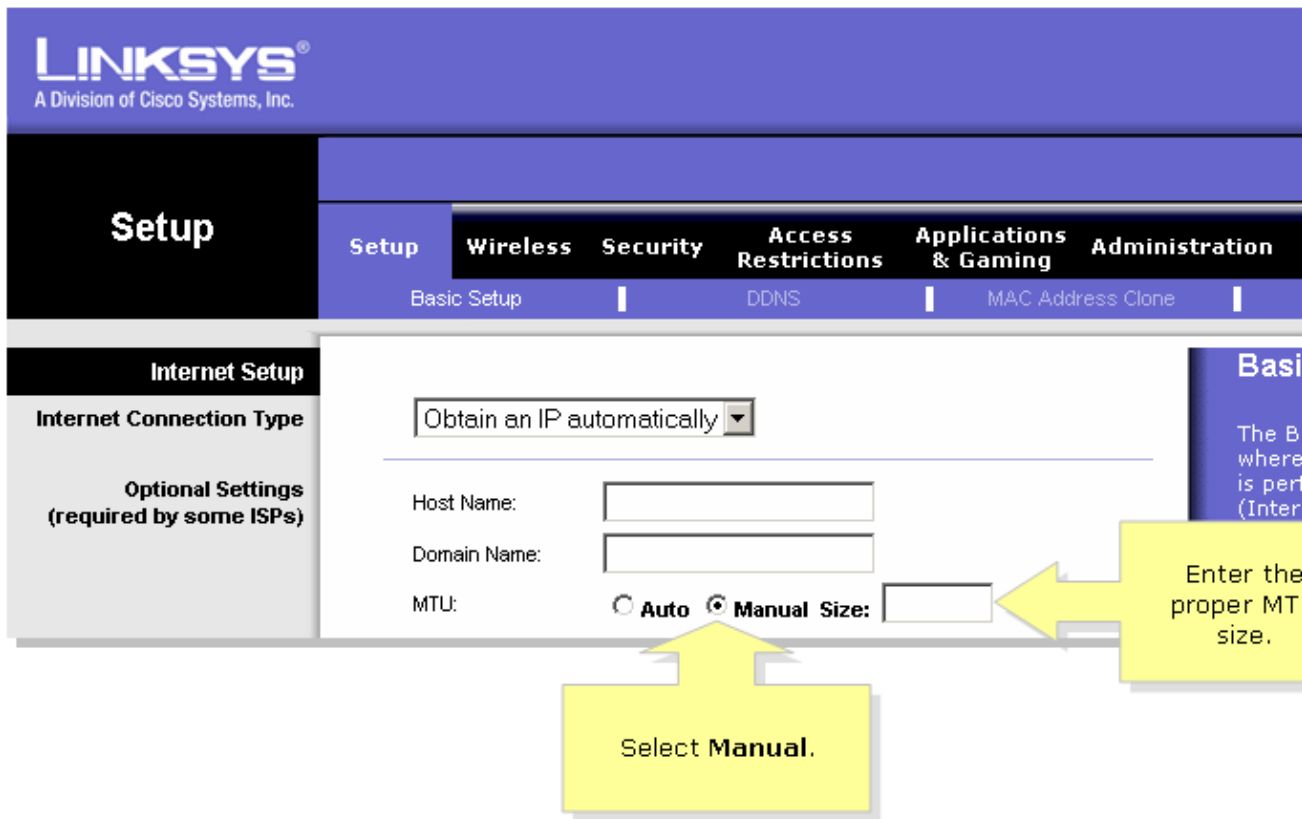

Determine the proper MTU size for the website.

Step 2:

Access the router's web-based setup page. For instructions, click [here](#).

Step 3:

When the router's web-based setup page appears, look for **MTU** and set it to **Manual**. In the **Size** field, enter the MTU value you obtained from Step 1.

Note: Here are the recommended MTU sizes for DSL and Cable Connection:

Cable Connection: 1500

PPPoE DSL Connection: 1492

Step 4:

Click **Save Settings**.

Note: If this did not work, complete the steps in the next section in order to open ports on the router.

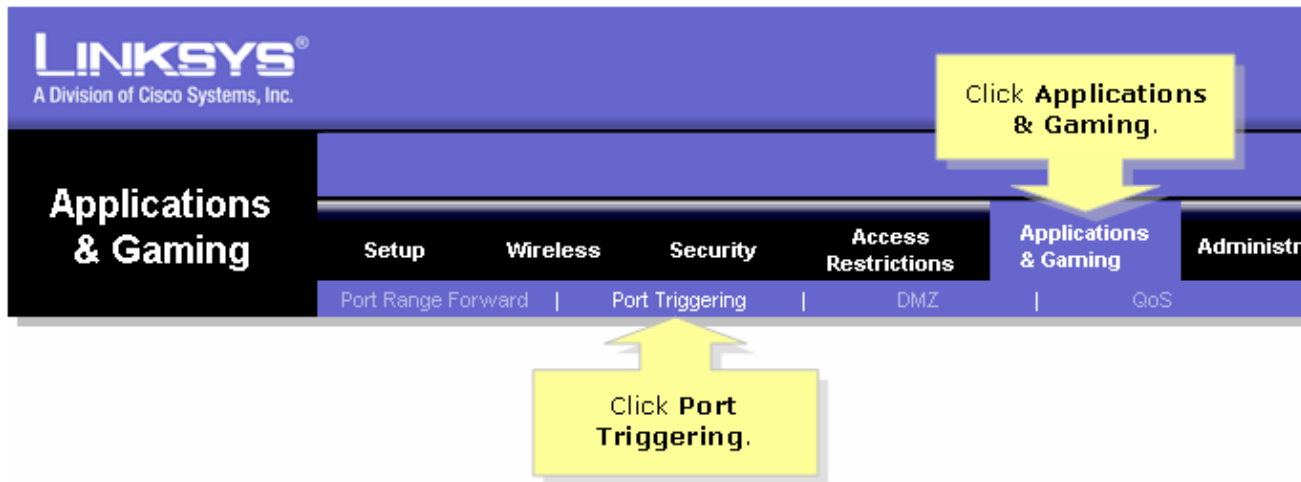

Open Ports for Secured Sites

Step 1:

Access the router's web-based setup page. For instructions, click [here](#).

Step 2:

When the router's web-based setup page appears, click **Applications & Gaming > Port Triggering**.

Step 3:

Under **Application**, type "https", and in the **Triggered Range** and **Forwarded Range** fields, type "443" (the port being used by https).
