# Cisco Unified Communications Manager Service Interface Reflected Cross-Site Scripting Vulnerability

**Advisory ID:** Cisco-SA-20141103-CVE-2014-3375 CVE-2014-3375 [Download CVRF](#)  
**Published:** 2014 November 3 20:21 GMT CWE-79 [Download PDF](#)  
**Version 1.0:** Final [Email](#)  
**CVSS Score:** [Base - 4.3](#)  
**Workarounds:** [See below](#)  
**Cisco Bug IDs:** [CSCuq90597](#)

## Cisco Security Vulnerability Policy

To learn about Cisco security vulnerability disclosure policies and publications, see the [Security Vulnerability Policy](#). This document also contains instructions for obtaining fixed software and receiving security vulnerability information from Cisco.

### Summary

A vulnerability in the CCM Service interface of the Cisco Unified Communications Manager Server contains a vulnerability that could allow an unauthenticated, remote attacker to conduct a cross-site scripting (XSS) attack against the user of the web interface of the affected system.

The vulnerability is due to insufficient input validation of certain parameters passed via HTTP GET or POST methods.

Cisco has confirmed the vulnerability in a security notice; however, software updates are not available.

To exploit the vulnerability, the attacker may provide a link that directs a user to a malicious site and use misleading language or instructions to persuade the user to follow the provided link.

Cisco indicates through the CVSS score that functional exploit code exists; however, the code is not known to be publicly available.

### Affected Products

Customers are advised to consult Cisco bug ID [CSCuq90597](#) for a complete list of affected product versions.

### Vulnerable Products

At the time this alert was first published, Cisco Unified Communications Manager versions 9.1(2.10000.28) and prior were vulnerable. Later versions of Cisco Unified Communications Manager may also be vulnerable.

### Products Confirmed Not Vulnerable

No other Cisco products are currently known to be affected by these vulnerabilities.

### Workarounds

Administrators are advised to contact the vendor regarding future updates and releases.

Users are advised not to visit websites or follow links that have suspicious characteristics or cannot be verified as safe.

For additional information about cross-site scripting attacks and the methods used to exploit these vulnerabilities, see the Cisco Applied Mitigation Bulletin [Understanding Cross-Site Scripting \(XSS\) Threat Vectors](#).

Administrators may consider using IP-based access control lists (ACLs) to allow only trusted systems to access the affected systems.

Administrators are advised to monitor affected systems.

### Fixed Software

Software updates are not available.

### Exploitation and Public Announcements

The Cisco Product Security Incident Response Team (PSIRT) is not aware of any public announcements or malicious use of the vulnerability that is described in this advisory.
