### Summary

A cross-site scripting (XSS) filter bypass vulnerability in the web management interface of Cisco Unified Communications Manager (UCM) versions 8.0 through 8.6 could allow an unauthenticated, remote attacker to mount XSS attacks against a user of an affected device.

The vulnerability is due to a failure to properly call XSS filter subsystems when a URL contains a certain parameter. An attacker that can convince an authenticated user of an affected device to follow an attacker-provided link or visit an attacker-controlled website could exploit this vulnerability to execute arbitrary code in the context of the affected site on the user's browser.

Cisco has not released software updates that address this vulnerability. There are no workarounds that address this vulnerability.

This advisory is available at the following link:  
<http://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-20151214-ucm>

### Affected Products

#### Vulnerable Products

Cisco Unified Communications Manager versions 8.0 through 8.6 are vulnerable.

#### Products Confirmed Not Vulnerable

No other Cisco products are currently known to be affected by this vulnerability.

### Workarounds

There are no workarounds that address this vulnerability.

### Fixed Software

When considering software upgrades, customers are advised to consult the Cisco Security Advisories and Responses archive at <http://www.cisco.com/go/psirt> and review subsequent advisories to determine exposure and a complete upgrade solution.

In all cases, customers should ensure that the devices to upgrade contain sufficient memory and confirm that current hardware and software configurations will continue to be supported properly by the new release. If the information is not clear, customers are advised to contact the Cisco Technical Assistance Center (TAC) or their contracted maintenance providers.

### Exploitation and Public Announcements

The Cisco Product Security Incident Response Team (PSIRT) is not aware of any public announcements or malicious use of the vulnerability that is described in this advisory.
