Cisco TelePresence IX5000 Series

Benefits

With the Cisco TelePresence IX5000 Series, you can:

- **Experience state-of-the-art immersive collaboration** with the world's first H.265 triple-screen system.

- **Create a vivid, rich-media collaboration experience** with three 70-inch LCD screens, three unobtrusive 4K Ultra High Definition cameras, and theater-quality sound.

- **Extend the immersive meeting experience** beyond the boardroom – no required room remediation*, half the power, bandwidth, and installation time results in 30% lower TCO over 3 years.

- **Enhance collaboration** with five simultaneous HD streams (three video and two content)

The most advanced collaboration experience

Create exceptionally vibrant immersive telepresence experiences with a state-of-the-art, rich-media system that is less costly to deploy than ever before. Finely crafted and easy to use, the Cisco TelePresence IX5000 Series brings together teams, customers and partners to make decisions faster. The immersive, lifelike experience increases engagement, which rapidly builds relationships and trust.

This sleek and powerful system incorporates an elegant triple 4K Ultra High Definition camera cluster, three high-definition 70-inch LCD screens and theater quality audio to bring people together as if they were just across the table. The IX5000 Series consists of the IX5000 single-row, six-seat system and the IX5200 dual-row, 18-seat system.

Superior Experience, Power and Functionality

Integrated lighting and 4K cameras enable the IX5000 Series to capture studio-quality video, while H.265 compression reduces bandwidth requirements by up to 50%. The powerful codec supports five simultaneous streams enabling three video and two content sources to be seen in crystal clear HD quality on any screen.

Advanced graphics capabilities enable smooth video and content transitions. This allows new features such as whiteboard mode, which captures images from a side-mounted whiteboard and presents them as if shot straight-on. And with the new stand-up mode, participants can move around the room and still be viewable from head to toe.

You'll enjoy theater-quality sound with 18 integrated table microphones, three-channel spatial audio, 18 custom high-fidelity speakers and a powerful subwoofer.

Lower Total Cost of Ownership

The IX5000 Series can be installed into a 19x14-foot space without room modification. Add to that 50% less power usage, and 50% less bandwidth utilization with H.265, and your cost of ownership drops significantly.

* For an optimal video experience, please follow the IX5000 Series Room Recommendations guide to ensure that ideal lighting and acoustic conditions are met.

- **Enjoy effortless content collaboration** with a universal connector for a "dongle-free" environment.

- **Experience new meeting flexibility** with whiteboard- and stand-up modes so you can move about the room and the camera won't miss a thing.

Install in a day, use with ease

Two people can set up the system in a single day:

- Six-seat system fits into 19x14-foot (WxD) space; 18 seats require a 31x21-foot space

- Packaging fits into a standard freight elevator and through a standard office door

- One network connection

Next Steps
