Aastra IntelliGate and Aastra 600d Next generation DECT

Aastra 610d

Aastra 610d

The Aastra 610d is the basic model for the business sector.

Its local phone book administers up to 350 contacts with three entries each. The redial list allows quick access to the last ten numbers dialled.

With its illuminated monochrome 2" display it guarantees an optimum overview and simple operation of the clearly structured menus at all times.

Aastra 620d

Aastra 620d

The user-friendly Aastra 620d is the high-end mobile phone for the professional.

Its large TFT colour display provides clear graphic displays and ideal legibility even under difficult light conditions. The display size offers the perfect conditions for intuitive menu guidance and simple operation.

Many freely programmable keys support the easy navigation and the use of different lines, e.g. to answer or forward incoming calls at the same time.

Equipped with a Bluetooth interface for a headset, the Aastra 620d enables maximum freedom of movement.

The high-quality lithium-ion battery can be charged via the USB interface, independently of the charging bay. The headset socket remains accessible, so calls can still be made via the headset while charging is in progress.

An optional power battery is available for operating times of up to 200 hours in standby mode.

Aastra 630d

Aastra 630d

The sturdy Aastra 630d is designed for use in tough working environments.

The device satisfies industrial standard IP65 and with its high level of dust protection and jet-resistent it can be used anywhere outdoors or in production. It is very easy to clean and with high hygiene requirements, making it ideally suited for the healthcare sector, too. The 630d is capable of withstanding fall heights of up to 2 metres onto concrete (DIN EN 60068-2-32).

Not only that, it offers all the user convenience of the Aastra 620d such as a large TFT display, Bluetooth® and USB interface.

With its integrated "mandown" alarm the phone is ideal for security professions or the prison and detention sectors. An additional emergency call key makes the 630d the ideal companion not just for security-related professions, but also for hospitals and care facilities.

The Aastra 600d family

Communications and mobility are essential to our modern professional lives. With the Aastra 600d family of mobile DECT phones, versatile communications and efficient co-operation have now become child's play. Wherever you are – at the office, on the production floor, in a warehouse or at your home office – the 600d family of handsets are your reliable communication assistants. With their clever functions, intuitive operation and tried-and-tested ergonomics, they are ideal companions in every situation of your professional life.

Your very own personal communication assistant

A good assistant is someone who adapts to your individual requirements and your habits. The 600d family of handsets not only looks good with its modern design, concealing a multitude of possibilities for adapting the phone to your individual usage habits and communication needs. Many of its keys are user-configurable, making important functions available at a single keystroke. The configurable keys located below the display can be set up to provide quick access to the functions you use most often. At any time you have access to key features, such as Voice Mail, using the left side positioned menu.

There are 40 polyphonic and eight non-polyphonic ring tones, allowing you to identify your mobile assistant instantly and acoustically by its ring. Different ring tones and melodies are assigned to individual callers, letting you know who's trying to reach you the moment the phone rings.

The Aastra 620d and Aastra 630d also adapt their appearance to your personal preferences and habits, with fully customisable menus, fonts, display contrast and brightness.

Mobile freedom

All the phones have a headset connection so you can have both hands free whilst taking a call. For the Aastra 620d and Aastra 630d you can also use a Bluetooth interface.

The 600d family of mobile terminals is perfectly geared to the Aastra IntelliGate systems, giving you reliable access to the many possibilities provided by the system, wherever you are within the company. In conjunction with Aastra's DECT-over-SIP solutions you also benefit from the possibilities and advantages of VoIP technology.

A strong family

Aastra's 600d family provides the right mobile assistant for your communication needs. The phones' outstanding speech quality makes for crystal-clear mobile communications.

The operation itself is so simple and intuitive that the User's Manual is certain to gather dust! The large 2" display is perfectly designed for optimum overview and good legibility.

Enjoy the possibilities

The new high-performance DECT system phones support you with a multitude of well thought-out standard and optinal features:

- A phone book with up to 350 contacts all with three entries each giving you access to all the main contact information.

- The ambient noise filter adjusts the ring tone and talk volume to the background noise in any given situation meaning optimum in-call communications, especially in loud environments.

- There are five different application profiles to adapt the phones to any given work situation, e.g. headset or conference mode.

- With their ingenious surface design the dialling keys are easy to locate at all times as well as the large, coloured display (Aastra 620d and 630d) offering the best overview – even in conditions of poor visibility or in situations of stress.

- A three-colour LED signals important events – for instance an appointment reminder, signalling an incoming call, warning you when you exceed the system's range or informing you the batteries are low.

- The intelligent battery management guarantees an overview of the battery capacity at all times.
